

DISINFECTION SERVICES OFFERED BY CENTURY

NOW *THIS* IS REAL

As the pandemic Corona virus spreads - it affects us all every day, Century is here to help every corporate office, construction site, hospital, medical center, retail establishment, airport and transportation

center to create safe and hygienic environments using EPA approved, safe chemistry. This meets the CDC/EPA efficacy requirement against the current threat, the 2019 Novel coronavirus (2019-nCoV).

The EPA has issued an Emergency Pathogen Policy that authorizes manufacturers that already have disinfection cleaners that have EPA registration approvals for certain viruses to use against the Covid 19 Coronavirus. We use an EPA-Registered, hospital grade disinfectant that is now approved for this virus. The chemistry will be used in all cleaning applications and can also be applied using fogging/atomization equipment to reach difficult to clean areas, and this service can be done while your employees are out of the building. Simply clean papers off of desks, and we'll do the rest. Food prep areas can also be treated, but not food itself. Call us today to get scheduled and we will explain the affordable service.

Our cleaning professionals are trained and ready to help with all your cleaning needs! Do not wait. Protect your workspace and environment for customers and employees.

CONTACT US NOW. We can provide daily, weekly, or monthly applications to common areas where there are concerns about viruses and bacteria.
